**Wire Backed Silt Fence**

**Description**

Wire Backed Silt Fence (WBSF) is constructed with a three or four foot high wire scrim, covered with a woven polypropylene filter fabric. The galvanized steel scrim supports the fabric in an upright position even under substantial loads of silt and water. A fabric apron extending beyond the wire is also available.

**Features**

- Materials: Galvanized welded wire mesh with fabric 100% PP
- Color: Black, Orange

**Benefits**

- A more robust silt fence
- UV resistance
- Can hold more silt before it needs to be cleaned
- Can double as a safety fence around a job site
- Easily attached to existing wire site fences

**Uses**

- Erosion control
- Silt control at construction sites
- Required in some jurisdictions
